EVOLUTION IN TREATMENT OF MULTIPLE SCLEROSIS IN A MEDIUM SIZED HOSPITAL

G. PICAZO, I.SANTAOLALLA, I.MARTÍN, L.CORRALES, B MARTÍN, B. SANTIAGO, C.MORIEL
Hospital Universitario Móstoles, Pharmacy Department, Madrid, Spain

Background

The introduction of oral drugs in the treatment of multiple sclerosis (MS) has been a change in the possibilities of therapy in which only parenteral treatments were available until recently.

Objectives

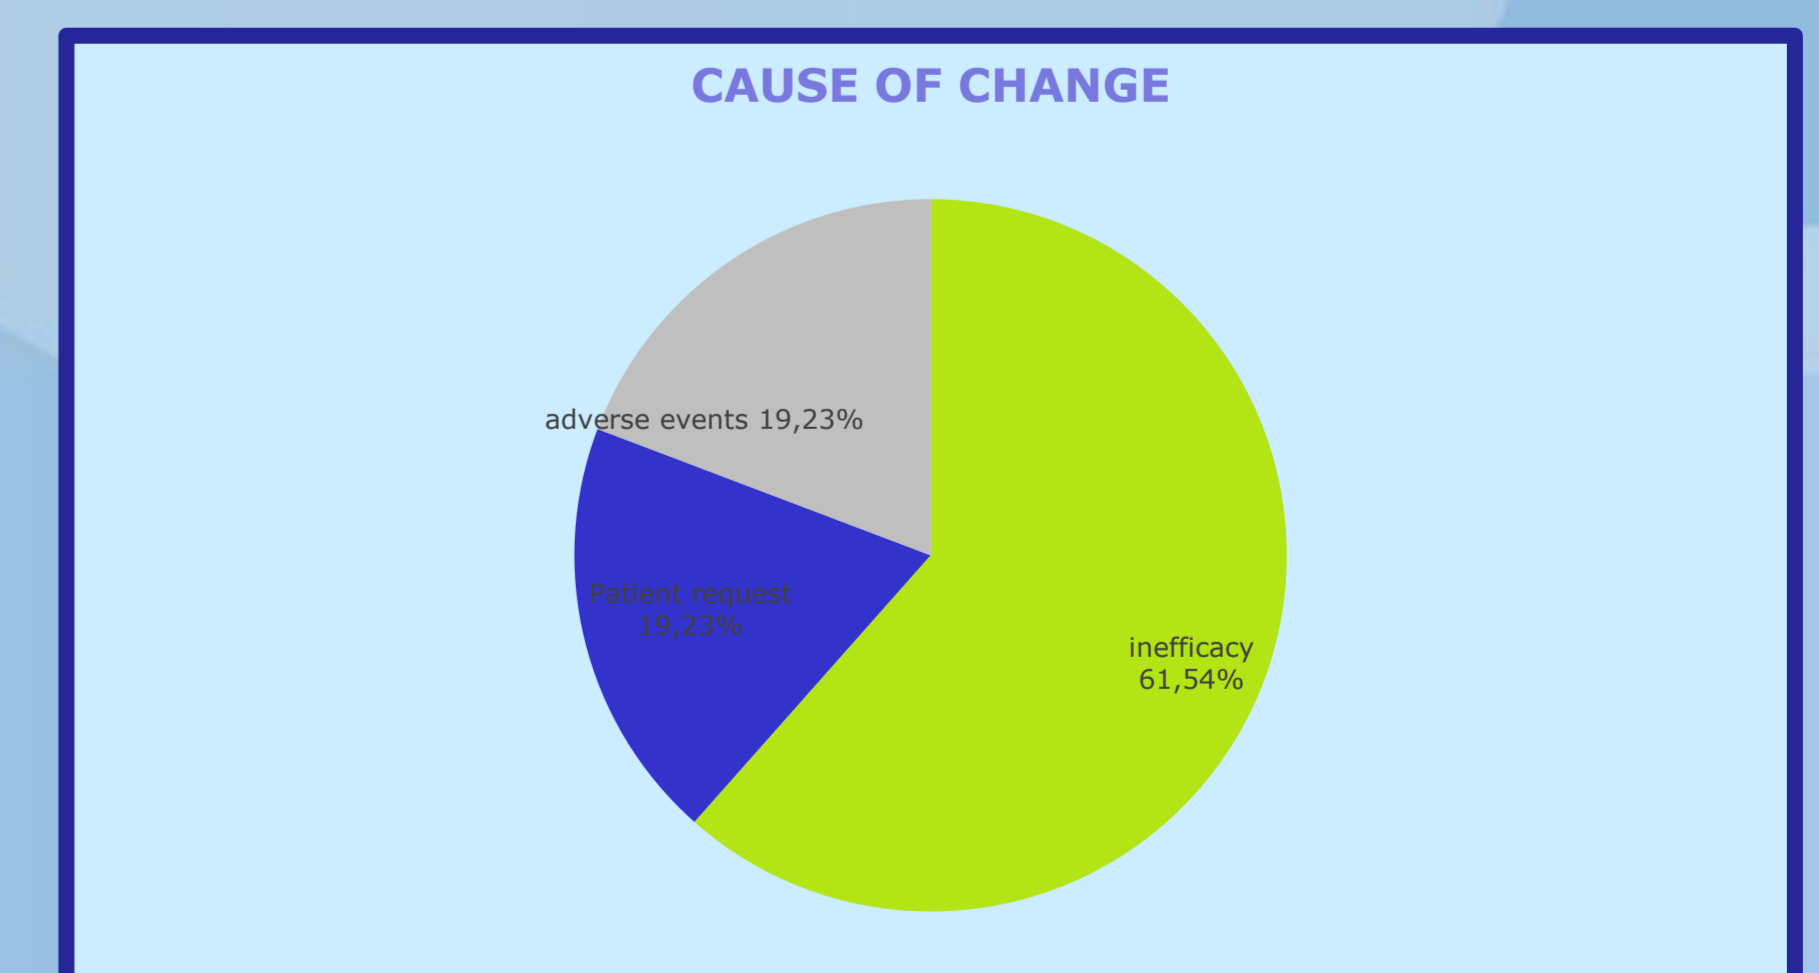

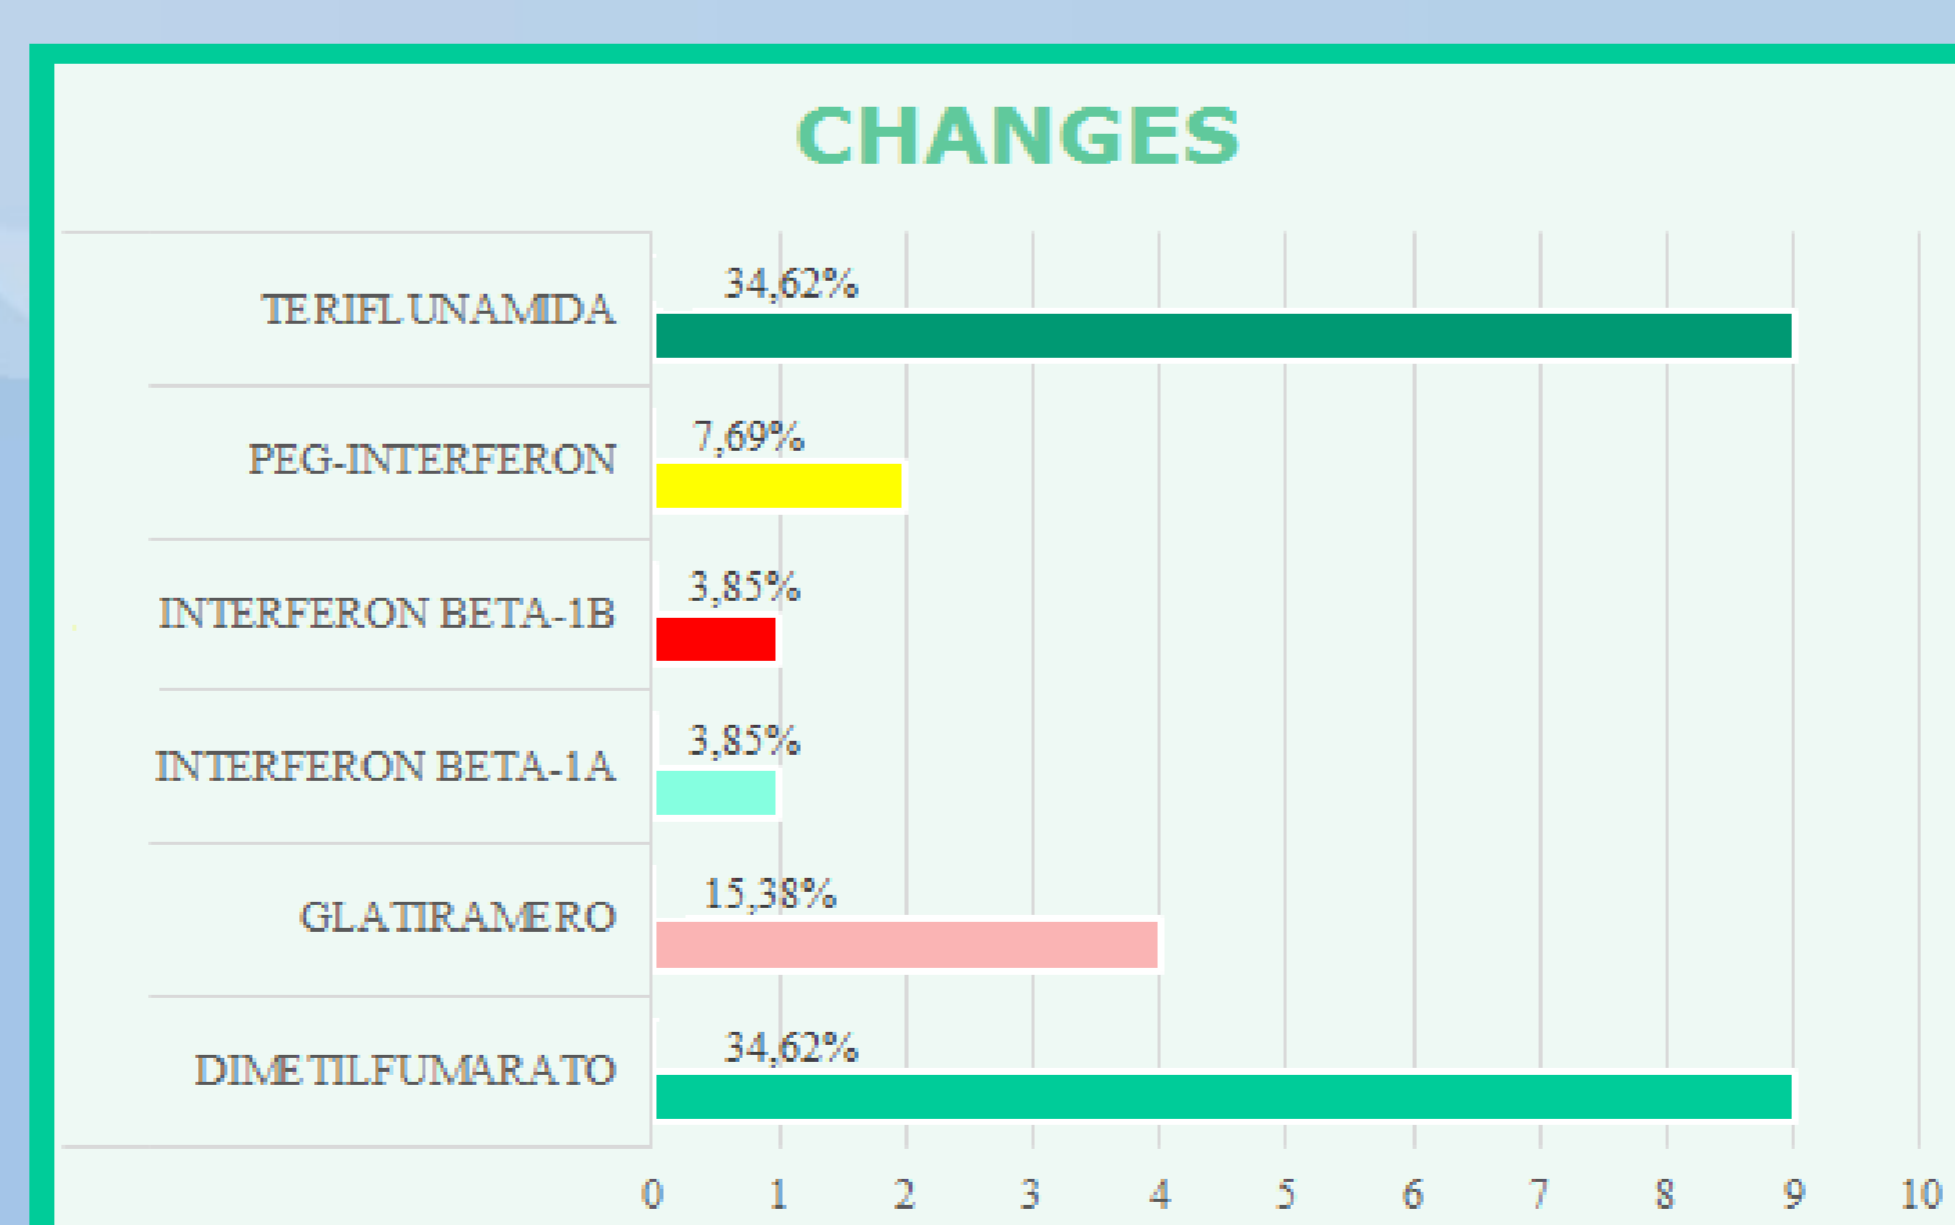

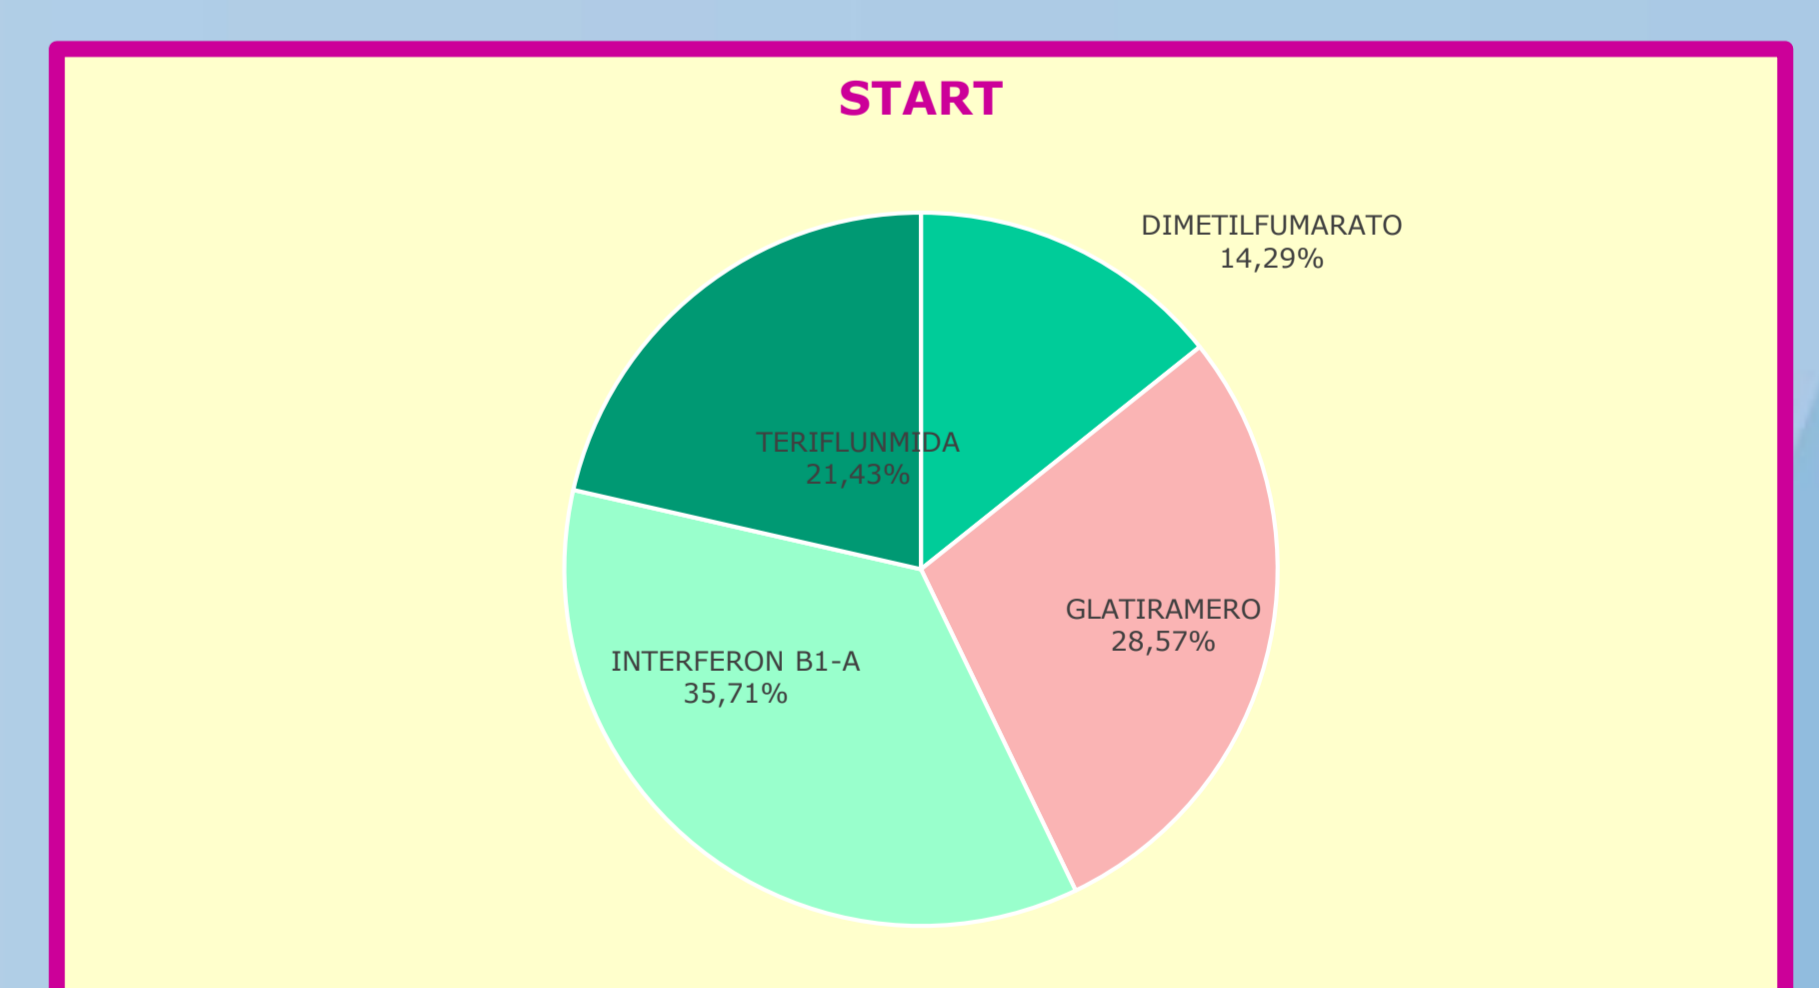

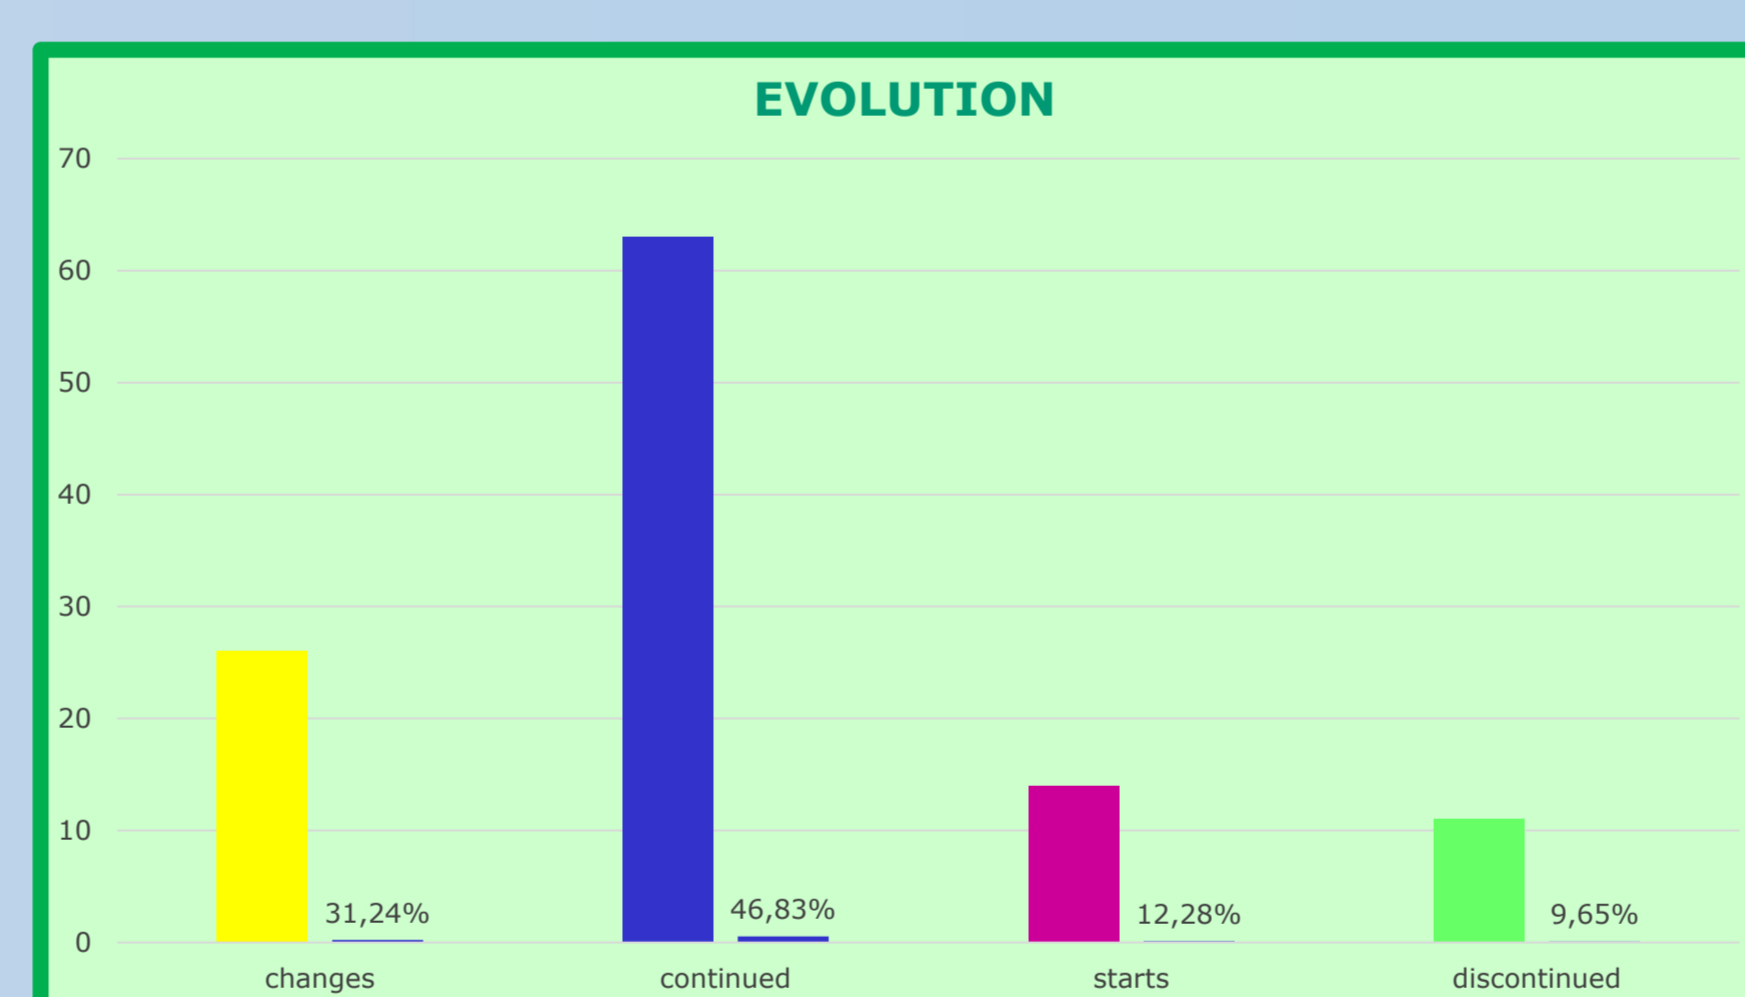

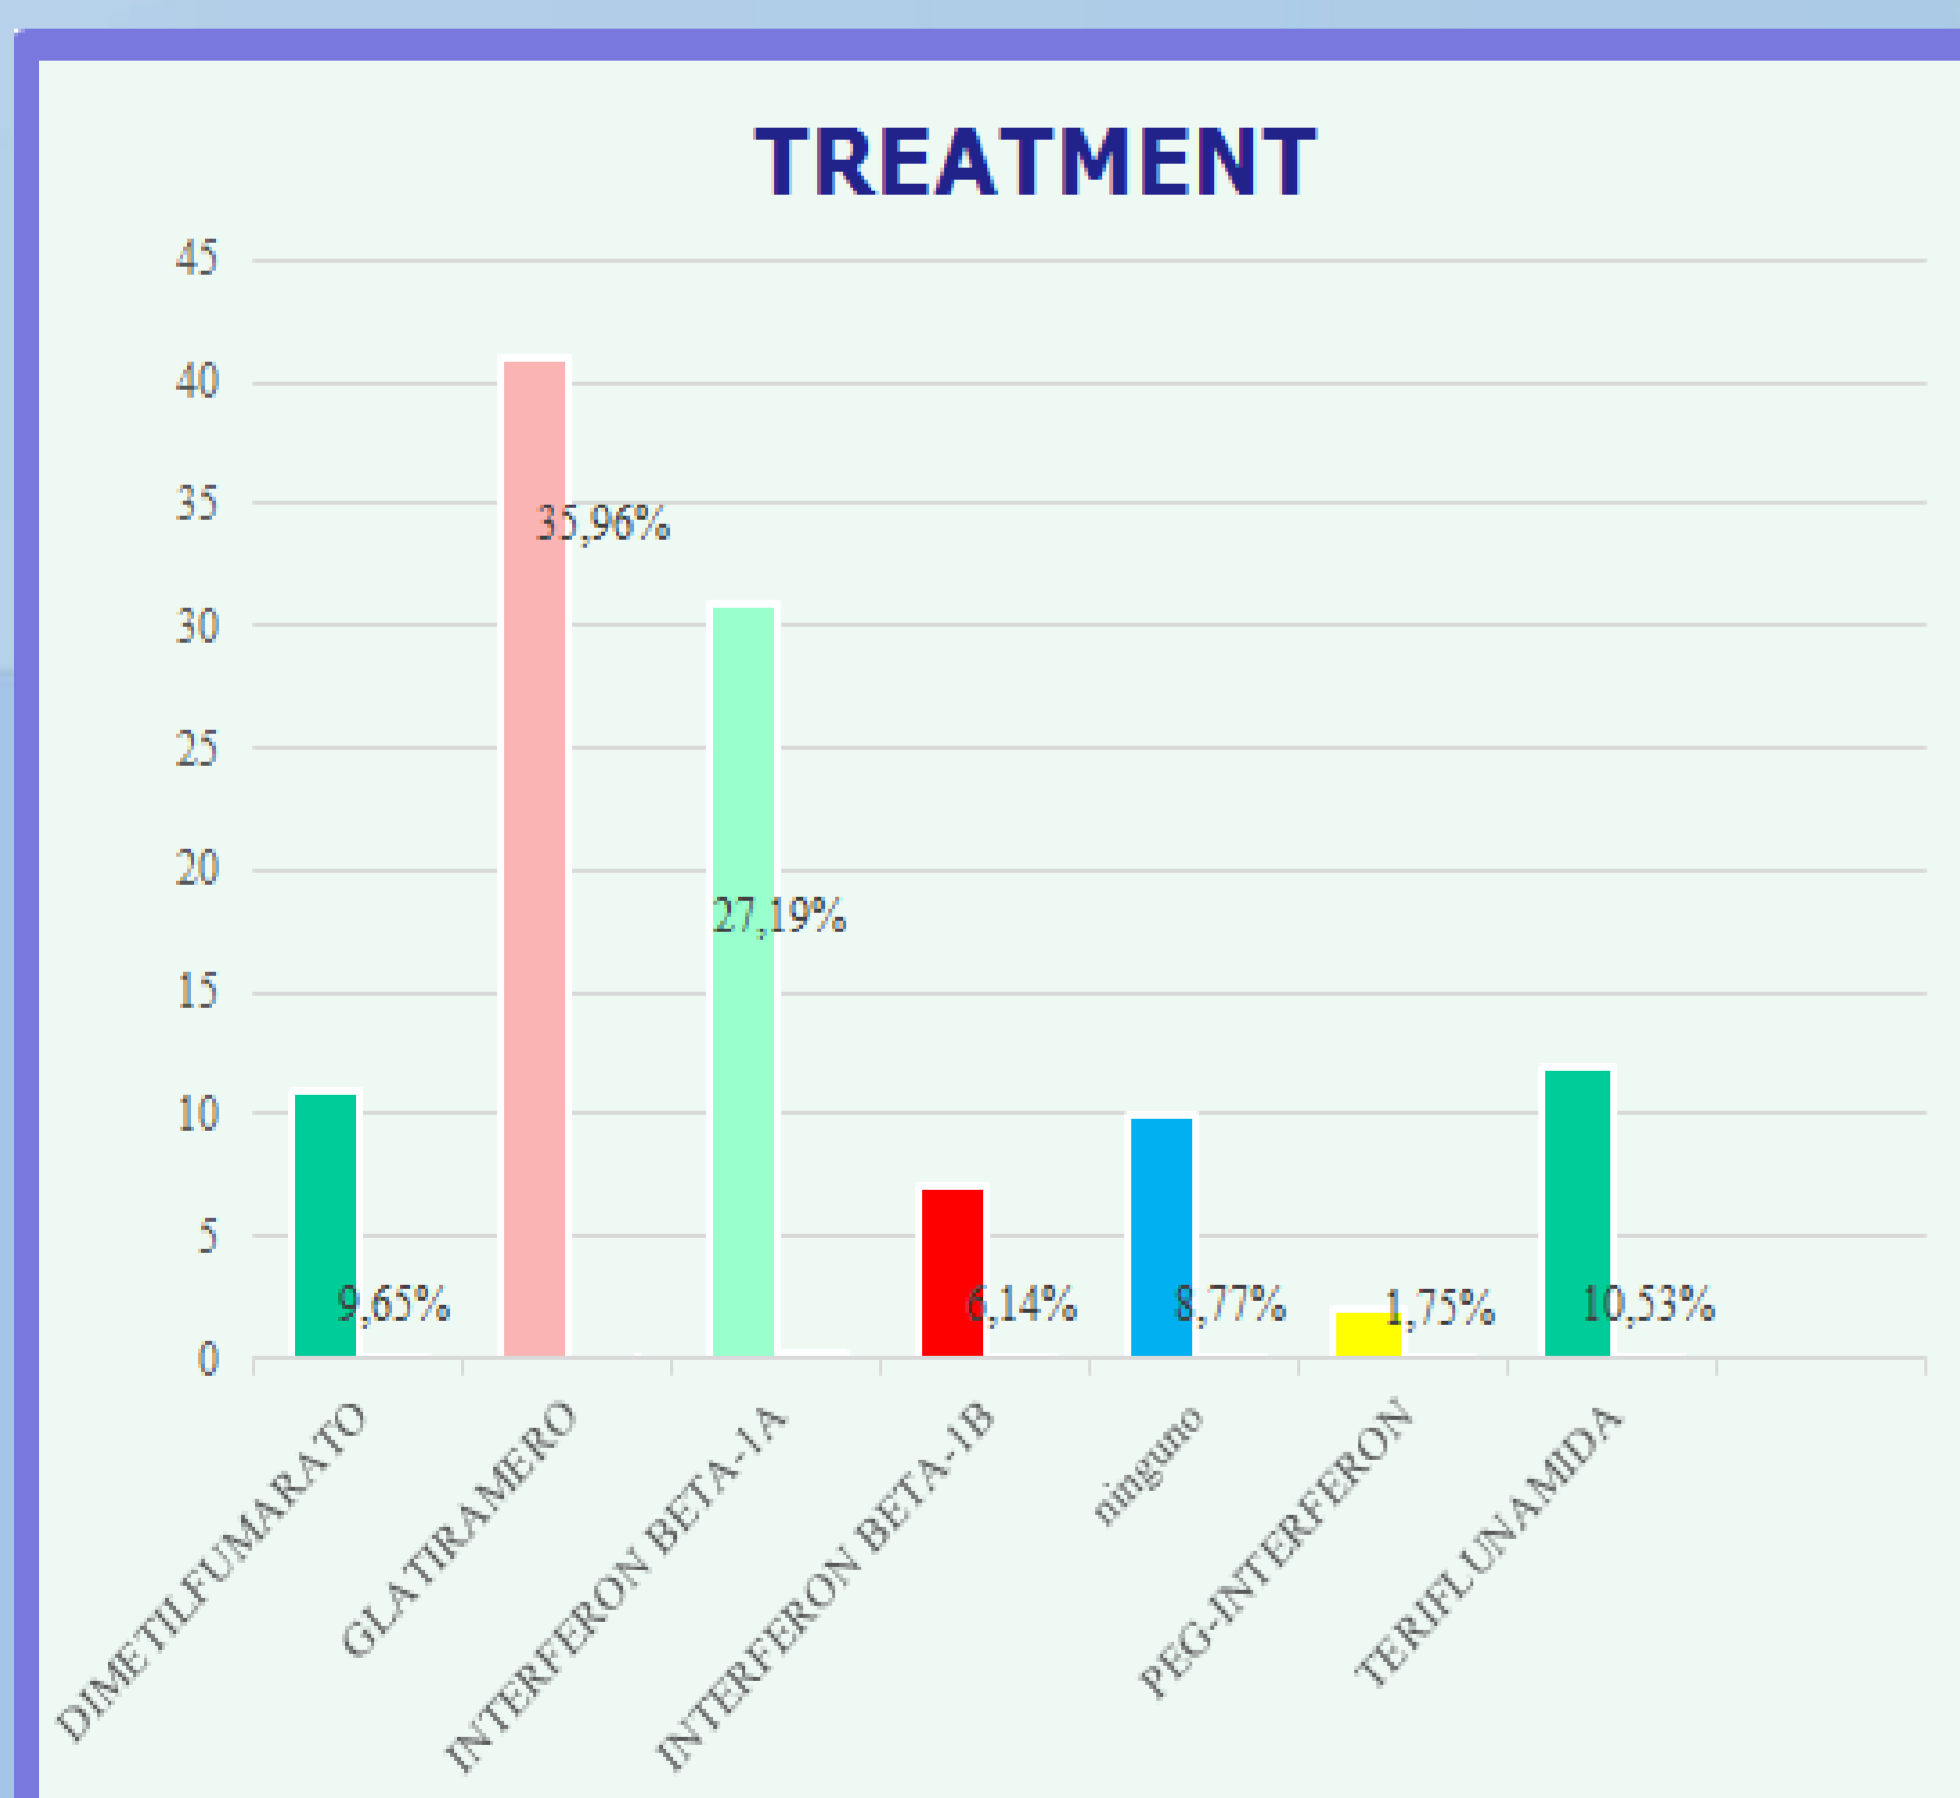

- Analyze the evolution of MS treatment prescription

Methods

- Observational retrospective study between January 2015-September 2016 that included MS patients.
- Through the program Farmatools® we obtained the list of patients to whom treatments for MS are dispensed from out hospital pharmacy.

Results

114 patients
72,81% women
Average age 42

Conclusions

- Treatment changes due to the patient request are an important cause of treatment choice.
- The new oral drugs are assuming a great change in the treatment of multiple sclerosis.
