BINAGHI HOSPITAL, HOSPITAL PHARMACY, CAGLIARI, ITALY

BACKGROUND AND IMPORTANCE
Penitentiary institutes contain a population of prisoners or interned who, from the moment they enter the prison, they bring with them their personal experience of discomfort that results in the concentration in a single environment of physical, mental and behavioral diseases. The direct consequence is the use of a large number of drugs. The activities of the hospital pharmacy include the distribution of drugs to penitentiary institute.

AIM AND OBJECTIVES
The objective of the study was to analyse the use of drugs in the prison population strongly influenced by the contingent situation and which has a high demand for health needs.

MATERIAL AND METHODS
A study was conducted to examine data of drugs required from the penitentiary institute in terms of quantity expressed in dosage units and costs from the data consumption of hospital medicines in the three-year period 2019-2021.

RESULTS

<table>
<thead>
<tr>
<th>Year</th>
<th>Total cost of medicine consumption (€)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2019</td>
<td>103.522,9</td>
</tr>
<tr>
<td>2020</td>
<td>81.484,31</td>
</tr>
<tr>
<td>2021</td>
<td>86.525,72</td>
</tr>
</tbody>
</table>

The total cost of medicine consumption in the penitentiary institution considered is 103.522.9 € in 2019, 81.484.31 € in 2020, down by 21.2% compared to the previous year and 86.525.72 € in 2021 (Δ% 21-20 = +5.8). Analyzing the first level of Anatomical Therapeutic Chemical (ATC) classification system, the highest consumption value is related to drugs for the nervous system (N), followed by those active on alimentary tract and metabolism (A) and cardiovascular drugs (C). By analyzing cost, the highest value is observed for the category of drugs for the nervous system, 68% in 2019-2020 of the total cost and 61% in 2021.

ATC 1st level: Highest consumption value
N: Nervous system
A: Alimentary tract and metabolism
C: Cardiovascular system

Most used substances in three-year period
- Valproic Acid
- Quetapine

Substances with the greatest cost
- Clonazepam
- Aripiprazole
- Promazine

Drugs active on alimentary tract and metabolism represents the 7% in 2019 -2020 and 11% in 2021 respectively. The therapeutic category with the highest consumption are psycholeptics, antiepileptics and drugs for disorders related to acid secretion. Among the substances with the greatest cost are clonazepam and aripiprazole in 2019-2020, while in 2021 is promazine. Valproic acid and quetiapine are the most used substances in the three-year period.

CONCLUSION AND RELEVANCE
The data described the use of drugs in a penitentiary institute emphasized the high pharmacological burden consequence of many pathologies in this population. In fact, psychotrophic drugs are the most commonly used substances. This data is related to the presence of neuro-psychiatric disorders in prisoners.
