IMPACT OF SERIALISATION ON RECEPTION OF MEDICINES AND ACTIVITY SMOOTHING

Pierre LACASSAGNE, Nicolas DELBARRE, Mélanie VASSEUR, Paul GIMEL, Gilles VITALE, Marie DESPLECHAIN ; Logipharma, CHU de Toulouse

Context:

02/2019: UE reglementation 2016/161 ➔ Serialisation ➔ improve the medicine’s safety. High number of medicine’s boxes induce a big change of practices because we’ll now need a robot.

Purpose:

Identify the modifications incoming with the new reglementation, in our process of reception.

Materiel and methods:

- Managing software: Copilote
- Analyze of 23 weeks on Excel

Results:

Create 3 flows instead of 1:
- Serialisable + Robot (SR): ~70%
- Serialisable + not Robot (SNR): ~30%
- Not serialisable + Not robot (NSNR): ~1%

Peak every 8 weeks

Conclusion:

We changed our analysis methods from lines to boxes in order to evaluate the storage in the robot.
We will now analyze the order’s calendar so we can smooth the activity.
