ADHERENCE IN POLYMEDICATED ELDERLY PATIENTS ADMITTED TO A TRAUMA WARD

L. MOÑINO DOMÍNGUEZ, A. AGUADO PAREDES, A. MARTÍNEZ SUÁREZ, C. CASTILLO MARTÍN.
HOSPITAL UNIVERSITARIO VIRGEN MACARENA, HOSPITAL PHARMACY, SEVILLE, SPAIN

Background and importance
Polymedication is one of the most important problems facing healthcare professionals in Europe today.

Aim and objectives
To analyse adherence in polymedicated elderly patients and its relationship with the number of drugs prescribed.

Material and methods
Cross-sectional OBSERVATIONAL study
February-May 2021
Traumatology area of a tertiary hospital

Inclusion and exclusion criteria →

Review medical history
Collect anthropometric variables
Review pathologies and home medication
Confirm all by a personal interview

ADHERENCE
Morisky-Green questionnaire

Statistical analysis
• Shapiro-Wilk normality test
• Non-parametric Mann Whitney U test

Results
- 48 patients
- 76.2% female
- Mean age: 83.8 ± 5.4 years

Mean number of pathologies/patient: 6 ± 2.6 (61.9% with five or more diseases)

Mean number of medications/patient: 9 ± 3.4. (35.7% highly polymedicated (≥10 medications))

Morisky-Green:
- 82.5% patients were adherent to treatment
- 22.5% were not taking ≥2 prescribed and necessary medications
- 36.6% were found to self-medicate

No statistically significant relationship was found between the number of medications and adherence (p=0.8)

Conclusion and relevance
Contrary to other recently published studies, adherence was good in our sample and was not related to the number of medications. The first finding may be related to the fact that many patients had caregivers who took care of their medication.
This study shows that a significant proportion of the population is self-medicating. This calls for closer monitoring by the community pharmacists, with patient education and collaboration with hospital pharmacists, whose easy access to medical records can help to conduct studies on the prevalence of polymedicated patients and the appropriateness of their prescriptions.
