PRESIDENT'S NOTE

Welcome to our 28th Congress!

Dear Colleagues, I am delighted to welcome you to the 28th EAHP Congress, here in Bordeaux, France.

From 20 to 22 March 2024, Hospital pharmacists from Europe and beyond will reconvene and join forces to further shape the future of our profession together - a future where new horizons, roles and competencies for hospital pharmacists will arise.

There is, however, a complex myriad of fine balances within our economic and ecologic systems that necessitate to approach our preparedness for the future from multiple perspectives. Professional readiness, up-to-date knowledge of the current proceedings of pharmacology, pharmaceutical care and supply chain management are by themselves a greatly multi-layered set of skills in our profession. A smart (re)positioning of our roles, on the other hand,

not only involves a proactive sense of direction, but also implies that hospital pharmacists will assume more roles and, consequently, more responsibilities as well.

To ensure that our future positions within healthcare teams are sustainable, professional societies, policy makers and relevant stakeholders shall act in cooperation with all professionals working in the field so that sufficiently qualified professionals could graduate from pharmacy schools in sufficient numbers. It is also our joint responsibility to measure, analyse and show decision-makers the real-life impact of hospital and clinical pharmacy interventions to healthcare outcomes and pharmaco-economic metrics, thus enabling true, value-driven and evidence-informed policy making. The best possible treatment of our patients requires sustainability at all levels of healthcare systems. It is imperative to advocate for a deeper collaboration with our colleagues in community pharmacies and clinical settings

in primary care in order to deliver seamless and high-quality pharmaceutical care. And last but not least, our endeavours for the future must be such that our one and only Mother Earth can sustain and support them.

These are the main messages and focus areas that we will present to you and discuss with you through our well-known format of keynote lectures, seminars, workshops, interactive sessions and symposia. We are very much looking forward to you all joining EAHP in Bordeaux and meanwhile, we will do our absolute best to prepare a venue and a professional atmosphere to enhance your experience of learning, networking and thinking together.

Welcome to the 28th EAHP Congress and welcome to Bordeaux!

28TH EAHP CONGRESS

What to look out for at the Congress

Welcome to the 28th Congress of the European Association of Hospital Pharmacists! This year's 2024 Congress theme will talk about opportunities and strategies that will help the health sector become more sustainable by delivering healthcare to patients without damaging the environment while at the same time, creating a positive social impact by increasing access to healthcare.

The programme for this Congress, themed: "Sustainable healthcare - Opportunities and strategies" offers a wide range of topics covering many aspects of the services hospital pharmacies can offer by applying sustainable approaches, thus minimizing negative impacts on the environment while delivering the highest quality of pharmaceutical care with a focus on the green hospital, carbon footprint and latest technology developments, to name a few.

A Young Professionals session having been a successful one during the previous Congresses, will also take place

this year, offering participants the opportunity to get worthwhile information, advice, and guidance to a future and exciting career in Hospital Pharmacy. This year it will be dedicated to international mobility and work experiences and will bring together hospital pharmacists who have embarked on journeys that took them across borders within Europe.

During these three days, we will host three Keynote speeches, a synergy satellite session on the very important topic of workforce shortages, seminars, interactive sessions, and workshops. Don't miss the Poster Walks, Abstract and Good Practice Initiatives' Poster Awards (whose Oral presentations will take place today with the awards handed out during the Closing Ceremony on Friday). We did our best to provide you with various networking opportunities the EAHP Congress has to offer, such as the Get Together Reception taking place today from 19.00 to 21.00 in the Agora Hall.

You are warmly invited to the networking events as well as to our booth #9 in the Agora Hall to get a full review and

presentation of the EAHP current activities and new upcoming events!

Don't forget to enter our two prize contests, "A Day in the life of a hospital pharmacist" and the "Statement wheel" at the EAHP booth. Explore Bordeaux Lake running 5km and support Children with Cancer on Friday morning at 07.00.

EAHP has worked hard to bring to you the best expertise, most recent updates in the sector and networking opportunities you do not want to miss. I hope you will find it interesting and useful!

Welcome to the Bordeaux Congress!

Jennie De Greef – EAHP Managing Director

KEYNOTE 1 | PREVIEW

Evolving towards sustainable healthcare systems?

To guarantee affordable healthcare in the future, most healthcare systems must be reengineered with a focus on sustainability. This lecture by Pedro Facon gives a general vision of evolving towards sustainable quality healthcare systems. It addresses the main hurdles and drivers in the evolution towards a sustainable healthcare system.

Pedro Facon is a public management professional in public health, social security and health crisis governance and management. He worked successively in research, teaching, advisory and management positions at the Public Management Institute (KULeuven), the National Institute for Health and Disability Insurance, the Cabinet Office of the Belgian federal Minister of Social Security and Public Health and the Belgian Ministry of Health. He is a Fellow at the Medical Campus of the Free University of Brussels and a Guest Professor at the Department of Public Health & Primary Care of the University of Ghent. In October 2020, he was designated Government Commissioner COVID-19 by the Belgian federal government. In April 2022, he was designated deputy administrator general of RIZIV/INAMI/NIHDI.

Pedro Facon obtained a master's degree in political science in Public Management and Policy in 2002 from the KU Leuven and received an additional degree at the Antwerp Management School in 2011.

"The first wealth is health", a quote from philosopher Ralph Waldo Emerson, is more actual than ever. Thanks to innovation, our healthcare has become very performant and accessible but nearly unsustainable at the same time. Due to high-price innovative therapies, rising costs, ageing, continuing drug shortages, and environmental impact, the time to change course and reengineer our healthcare systems is now.

Shorter lengths of stay, possible therapies in day clinics, transmurial care and home hospitalisation initiatives change the need for resources in the different lines of healthcare. At the same time, the organisational structure and financing model of healthcare systems are still often historically pillarised. Market access entry agreements, pay for performance, pathology financing, and fair review of reimbursement criteria (with respect to ICER and ethical questions) are tools to facilitate this transition.

But also human aspects such as promotion of prevention, a healthy lifestyle, a healthy work environment for care workers, job satisfaction, work-life balance, shortage in the labour market, task purification, lean administrative burden and potential benefits from automation and digitalisation are drivers for a sustainable system.

Last but not least, there's more focus on the carbon footprint of our healthcare systems. The pandemic and the financial crisis showed us the importance of local production capacity, a short supply chain, and a circular economy with minimal waste and medicine residues in nature. Smaller and biodegradable packs can also add to a green pharmacy and, in the meantime, have a positive impact on antimicrobial resistance or overconsumption. Responsible procurement answers to this within the legal possibilities.

This keynote, will provide a general vision of how to evolve towards sustainable quality healthcare systems.

Prof. Dr. Thomas De Rijdt
EAHP Scientific Committee Chairman

PROJECT UPDATE

10th Anniversary of the European Statements of Hospital Pharmacy

This year marks the 10th anniversary of the European Statements of Hospital Pharmacy. The European Statements represent what EAHP, and its members believe every European Health System should aim in the delivery of Hospital Pharmacy services. The European Statements of Hospital Pharmacy represent the future of the profession and we believe that its implementation will help achieve better outcomes for patients.

The statements were subject to open Delphi consultation with national hospital pharmacy associations, European patient groups, doctors, and nursing organisations. The same organisations then gave their final joint approval to each statement individually by a weighted voting method at the Summit event that took place in May 14-15, 2014.

A lot has progressed since the Statements were adopted and EAHP and its members have been working on preparing tools and resources to help hospitals move towards the implementation of the European Statements. We have

developed an online Self-Assessment tool and a training programme allowing hospital pharmacists to visit hospitals from other member countries to receive training in procedures linked with the Statements. Every project and initiative undertaken by EAHP is deeply rooted in the Statements and their practical implementation..

The European Statements are not a static document and like the hospital pharmacy profession, they can evolve. For that reason, EAHP decided to review the Statements in 2021. The Statements were found resilient but an updated commented version was published to further clarify the meaning of some of its Statements.

EAHP has prepared a large awareness campaign that will take place in April and May including interviews and podcasts about the Statements and other surprised! Follow us on social media to learn more about the campaign. In addition, if you stop by the EAHP Booth you can get an anniversary bookmark. Ask for it at the booth.

All the information about the Statements can be found at www.eahp.statements.eahp.eu

– EAHP Project Portfolio Manager

EAHP NEWS

ECPPhA: a new horizon for the accreditation of pharmacy continuing education

The European Council for Pharmacy Education Accreditation (ECPPhA) was founded as a separate organisation by the EAHP and the European Society of Clinical Pharmacy. ECPPhA was launched in October 2023 and a lot has happened since then.

ECPPhA's mission is to help improve the quality of continuing education in pharmacy practiced in healthcare settings across Europe via accrediting live and online lifelong learning events throughout collaborating with national healthcare professional associations and national accrediting bodies. This is achieved through applying high quality standards in the assessment of available and future continuous professional development and educational programmes, which address the needs and current practice of pharmacists, pharmacy technicians and the pharmacy staff practicing in Europe.

ECPPhA is an accreditation provider with the goal of providing an additional for the national accreditation systems in the countries where there is one, and not be a substitute of them. A European body, such as ECPPhA, will ensure that accreditation of European continued education events is aligned with European practice.

In addition, ECPPhA is facilitating the attendance of national education events by participants from other countries by ensuring the transferability of continued education points between countries. ECPPhA's accreditation is also open to other countries from outside Europe.

At the moment this article was written, three educational activities have already been accredited via ECPPhA and more are in the pipeline to receive accreditation. ECPPhA has also developed a network of independent reviewers.

Are you interested in submitting an educational event through the ECPPhA accreditation system? Contact the ECPPhA team at info@ecppha.eu to learn more about this.

Gonzalo Marzal Lopez
– EAHP Project Portfolio Manager

KEYNOTE 2 | PREVIEW

Impact of climate change on human health: a resilient approach

Climate change has a known impact on health and present and future diseases. This lecture by Peter Morgan provides insight into the possible diseases that could arise due to climate change, climate change-related risks to access to medicine and the strategies that can address these emerging health threats.

Peter Morgan is currently the Head of Medicines Net Zero for NHS England. He studied Pharmacy at the University of Bath and registered as a pharmacist in 2014. He is an independent prescriber in clinical nutrition and a Fellow of the Royal Pharmaceutical Society.

Climate change is profoundly altering our daily lives. Worldwide, people in both high- and low-income countries are increasingly feeling the impact of these changes on their health and well-being, reflecting the effects of continued dependence on fossil fuels. From an epidemiological perspective, climate-related environmental changes are associated with an increase in the incidence of chronic diseases already prevalent in the northern hemisphere, such as cardiovascular disease and mental illness, leading to increased use of related, heavily used Western medications. Respirable, waterborne, and foodborne toxins and infec-

tions, including those transmitted by vectors, may become more prevalent in Western countries, Central and Eastern Asia and North America. As new disease threats arise, there is a growing need for the development of effective medications and treatments. This can drive scientific and pharmaceutical advancements, leading to the discovery of new drugs and therapies that can address not only climate-related diseases but also existing health conditions.

Furthermore, a "horizon scanning" approach can be a powerful tool for identifying potential future health challenges and preparing appropriate responses.

By proactively anticipating these problems, we can allocate resources, enhance preparedness, and invest in research and development to address emerging health threats. This lecture should help all of us, including hospital pharmacists, to stay ahead of the curve and mitigate the potential impact of climate change on our health.

Prof. Dr. Thomas De Rijdt
EAHP Scientific Committee Chairman

POLICY ARTICLE

Another step towards solving Shortages: the 2023 Shortages Survey

In 2023, EAHP conducted two large investigations, one on the progress of the European Statements of Hospital Pharmacy conducted together with Keele University and one on medicine shortages.

The 2022/23 EAHP Investigation survey showed new insights into how the hospital pharmacist profession is shaping the future of pharmacy. Implementation of the Statements appeared most difficult in section 4, Clinical Pharmacy Services. (see table) This indicates little progress in clinical patient-facing services compared to the more traditional pharmacy services. Lack of capacity (staffing shortage), other healthcare professionals performing this service, and not a priority with managers were the top three cited reasons for this. Many hospitals employ low numbers of pharmacists and technicians in relation to the number of beds they contain, which would support the 'lack of capacity' responses. In fact, statistical analysis of the results indicates a clear relationship between staffing numbers and responses to the delivery of clinically orientated services. The 'clinical pharmacist' role is well established in some countries but still a rarity in others. Considering the pivotal

role pharmacists can play as medicine experts, this report will help.

In the meantime, hospital pharmacists are also faced with another pressing issue: medicine and medical device shortages. In 2023, EAHP conducted its 5th Shortages Survey, comprehensively examining this problem. The results of the 2023 Survey show that, like in 2019, 95% of hospital pharmacists reported that medicine shortages are a major problem. In comparison, only 86% of other healthcare professionals, 84% of physicians, and 68% of nurses considered medicine shortages a current problem in their hospitals. All four professional groups had very similar views on medical device shortages, with 61% of hospital pharmacists, 57% of physicians, 55% of other healthcare professionals and 46% of nurses indicating that shortages caused problems for their patients. The causes of medicine shortages mentioned by hospital pharmacists were, like in 2019, the global shortage of an active pharmaceutical ingredient (API), manufacturing problems and supply chain problems. The medicines most frequently in shortage were antimicrobial agents (76%), Analgesics (43%) and anaes-

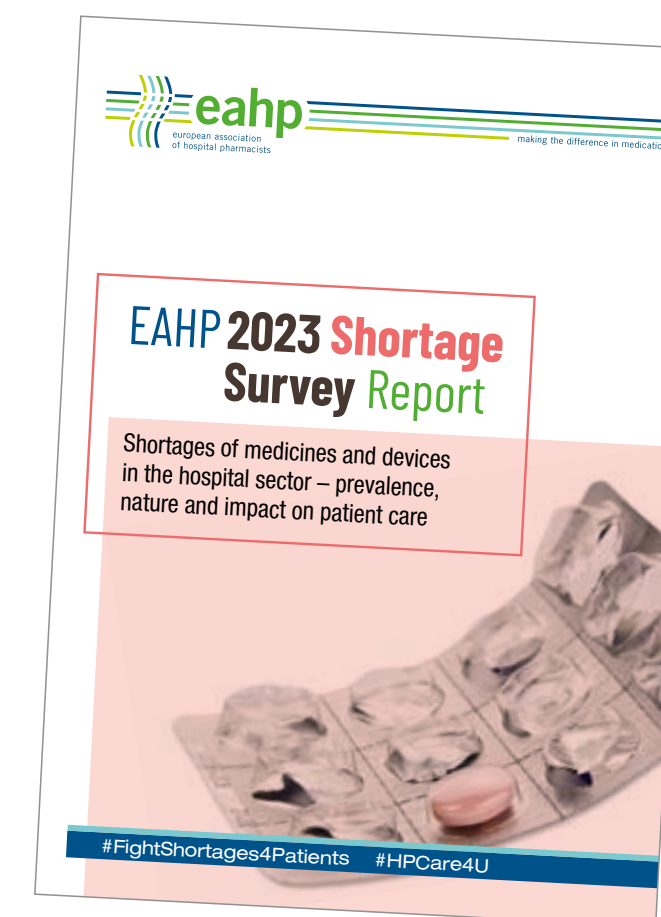

thetic agents (37%). More than half of the hospital pharmacists (61%) mentioned that shortages affect patient care in their hospitals.

With the help of these concrete numbers, EAHP continues to advocate and urge policymakers to include legislative preventative measures in revising the EU's General Pharmaceutical Legislation.

Catharina Knol – EAHP Team

TOP 6 MOST DIFFICULT STATEMENTS TO COMPLY WITH		Mean percentage of positive responses* across all countries
1	S4.4 The pharmacists in our hospital enter all medicines used onto the patient's medical record on admission.	33.4%
2	S6.4 The pharmacists in our hospital enter all medicines used onto the patient's medical record on admission.	39.8%
3	S4.5 The pharmacists in our hospital contribute to the transfer of information about medicines when patients move between and within healthcare settings.	42.8%
4	S1.1 The pharmacists in our hospital work routinely as part of the multidisciplinary team.	52.5%
5	S4.6 The pharmacists in our hospital ensure patients and carers are offered information about their medicines in terms they can understand.	55.9%
6	S4.2 All prescriptions in our hospital are reviewed and validated as soon as possible by a pharmacist.	59.9%

* A positive response is defined as a response of 3, 4 or 5 on a scale of = never able to comply, 5 = always complied.

POLICY ARTICLE

Join us to celebrate the Hospital Pharmacy Day!

The first ever Hospital Pharmacy Day will take place on March 27th. The goal is to celebrate the staff working tirelessly to ensure medication safety in the hospital pharmacies. Hospital pharmacists, technicians, nurses, administrative staff, and other professionals working in the hospital pharmacy need to be celebrated!

This is why EAHP decided to start the Hospital Pharmacy Day, but we've invited other international associations and associations representing other professionals working in the Pharmacy to join this important initiative. This day has the ambition to raise awareness about the work performed by professionals in the hospital pharmacy and other parts of the delivery of hospital pharmacy services. National authorities and all relevant stakeholders working within the healthcare systems need to understand the importance of having well-funded and well-prepared hospital pharmacies to ensure better patient outcomes in the hospital setting.

Hospital Pharmacies are essential to ensure the correct functioning of the healthcare systems and are in charge of ensuring timely and equal access to appropriate and safe medication with high-quality pharmaceutical care.

Hospital Pharmacies are key to tackle very current and important issues like the fight against antimicrobial resistance or the medicines shortages. In addition, hospital pharmacies were in the frontline during the COVID-19 pan-

dem, and we believe that this important and tireless work should be celebrated and showcased to patients and other healthcare professionals.

We are inviting all professionals working in a Hospital Pharmacy to join this important campaign. Thus, we have prepared a detailed toolkit with different awareness materials that can also be adapted by each pharmacy. You can find the toolkit [here](#).

Also, don't hesitate to stop by the EAHP booth #9 to get stickers and a bag with the Hospital Pharmacy Day logo.

Gonzalo Marzal Lopez

PHARMACY
DAY** 27 March

YOUNG PROFESSIONALS

Exploring international mobility in pharmacy: a young professionals session

This year's Young Professionals Session promises to be an enlightening exploration of international mobility and work experiences. Hospital pharmacists will share their personal stories, motivations, challenges, and triumphs encountered before and after embarking on international experiences. Through this series of shared experiences, participants will gain a comprehensive understanding of the possibilities, procedures, and strategies associated with mobility in Europe, along with the challenges and rewards it entails.

The session will feature a panel of hospital pharmacists with varied international experiences:

- **Xandra Garcia** (Spain): Discussing pre- and post-graduate European mobility opportunities.
- **Evelyne van den Broucke** (Germany): Sharing insights from an Erasmus exchange at the University College London School of Pharmacy.
- **Stefanie Deuster** (Switzerland): Reflecting on transitioning from Germany to Switzerland and navigating different healthcare systems.

- **Lene Juel Kjeldsen** (Denmark): Sharing her journey from Denmark to Australia for a PhD and its impact on her career in management, research, and clinical pharmacy.
- **Kornelia Chrapkova** (Czechia): Discussing her professional journey between Slovakia, the Czech Republic, and the United Kingdom.
- **Nuria Sala** (Spain): Sharing her worldwide experiences, including internships in France, Canada, and the United States.

Don't miss this chance to gain valuable insights, network with professionals, and explore international mobility in pharmacy. Join us for an enriching session that promises to inspire and inform your professional journey.

Date: Wednesday, 20 March 2024
Time: 11:30am to 1:00pm
Location: Room A

– Scientific Committee Member

Anniversary Statements game: stop by the EAHP booth to win some gifts and a free congress registration.

This year marks the **10th anniversary of the European Statements of Hospital Pharmacy** and we wanted to celebrate this with you. The team has prepared a **game** where you can win personalised recycled notebooks, recycled isotherm mugs and enter a raffle to win a free registration entrance for the 1st EAHP Boost in Florence, Italy.

How can you participate? Stop by the EAHP Booth #9 and check the Statements wheel as the team has prepared a wheel with questions about the European Statements and if you get the answer right, you will be able to get a gift and leave your details to then enter a raffle for a Free registration for Boost.

EAHP FunRun: Explore Bordeaux Running! Bring your running shoes!

When? Friday March 22th 7.00-8:00 (Sunrise at 7:01)
Where? 7:00 Start at [Entrance Congress Centre](#)
How much? €15,- Pay cash at 6:50 on Friday March 22th
Why? To support Children with Cancer
How? 5 km run around the lake of Bordeaux

Registration is appreciated: kikarun@xs4all.nl

A together run in Bordeaux, at slow speed, for everyone with running shoes.

Expected temperature: +10 to 13 degrees Celcius

Souvenir: White running jacket

We will be back and have a shower before the Scientific program starts.
