A MESSAGE FROM THE SCIENTIFIC COMMITTEE CHAIRMAN

Dear Friends of European Hospital Pharmacy, "**Sustainable healthcare - Opportunities and strategies**" will be the theme for the presentations at the 2024 EAHP Congress, in Bordeaux. During last year's Congress, we focused on what

really matters to patients in the broad process of pharmaceutical care. And you must have noticed in your daily practice that the evolution towards personalised medicine is inevitable and that hospitals pharmacists have a key role in it. This year we help you to see opportunities and build strategies for a sustainable healthcare. We want to think about introducing and maintaining a high quality care level we, and our planet, can afford. This is an invitation to all of you to join us.

The 28th EAHP Congress will offer you inspiration to reshape your processes and services towards a sustainable format with respect for quality, patient-safety and equality. It will not surprise you that sustainability, carbon foot prints and polypharmacy are the themes for our three keynote lectures. In the first we will bring a general vision on how society can evolve towards an affordable and sustainable

healthcare system. The science behind the calculation of carbon footprints of medication will be the subject to the second keynote lecture, followed by a third keynote on the use of action learning sets to improve problematic polypharmacy.

Like last year we have connected more than 20 seminars and workshops, which are open for interaction with the speakers, to different Sections of the European Statements of Hospital Pharmacy. Some of the hot topics are involvement of different stakeholders in sustainable healthcare, green hospital, carbon foot print, stability studies, cooperation over country borders, patient involvement in clinical pharmacy, patient safety, health technology assessment, antimicrobial stewardship, use of real world data and inter-professional education. Information will be shared during the seminars in the form of presentations by two or three speakers allowing sufficient time for questions. Also a seminar dedicated to a current topic in pharmacotherapy will be added.

Along with keynotes and seminars, best practices will be disseminated by our abstract poster prize nominees and through the Good Practice Initiatives (GPIs). In addition,

workshops within the theme of the congress will be given providing inspiration on psychosocial wellbeing of healthcare professionals, identifying options for sustainability, check of compounding appropriateness, pharmacogenetic testing, critical shortages and digital clinical education.

Based on the success of the format, the Synergy Satellite programme is extended and will continue with many relevant topics. Also an interactive Young Professionals Session will be organised as a panel discussion in order to share experience and expertise.

Join the 28th EAHP Congress in Bordeaux, the French capital of wine, also known for its gastronomy and the UNESCO world heritage 'Port de la Lune'. As one of the six university cities of France and with its reputable academies it is the ideal place to share knowledge and to connect with EAHP members and participants from around the world. Come and enjoy.

KEYNOTE 1 | REVIEW

Evolving towards sustainable healthcare systems?

The 28th EAHP Congress started with an inspiring keynote from public health, social security, and health crisis management expert **Pedro Facon**, who gave insight into the drivers and hurdles in the evolution towards sustainable qualitative healthcare systems.

In the keynote, Pedro Facon introduced us to the **OECD Health System Performance Assessment Framework**, which evaluates the key factors stirring healthcare systems' performance. The Framework is centred around people's needs and preferences, as healthcare system activities need to result in health for individuals and for populations. The Framework includes four "cross-cutting" dimensions of health system performance: sustainability and resilience on one side with equity and efficiency on the other. In the last years, the resilience dimension has become more and more important, as healthcare systems had to be resilient to high levels of 'stress'. The COVID-19 pandemic, for instance, has vividly illustrated the necessity of positioning resilience at the core of all our healthcare systems.

Another key aspect driving healthcare systems that Pedro Facon highlighted, is the high growth of public health expenditure over the past ten years, which has outgrown the economic growth within Europe. To combat this increase, the most sought-after policy intervention that is often considered is that of efficiency gains. Yet achieving them is far from simple, as the implementation touches upon various aspects including healthcare system adaptation, business models, cultural shifts and behavioral change. Therefore, Pedro Facon stressed the importance of taking concrete actions and pinpointing essential priorities to concentrate on what truly matters: shifting hospital stays to outpatient care, concentration of complex and/or expensive care, integrated care networks that blur lines between primary and secondary care, increasing efficiency by streamlining, digitalization, evidence-based practice, changing regulations

and transformation of financing models of care. By using these priorities, healthcare systems can be more financially sustainable.

Perhaps even sooner than running out of money, the healthcare system is also running out of people, according to Pedro Facon. There is a clear need to enhance healthcare workforce strategies on a national, European and international level. Besides enhancing the entire HR-cycle, this requires reorganization of care and multidisciplinary teamwork around the patient.

Furthermore, the relationship between expenditure and innovation were highlighted. This relationship is crucial for steering R&D towards unmet medical needs and to build bridges between professionals, authorities, and industry to find innovative solutions together. Moreover, Pedro Facon highlighted the importance of increasing security of medical supply chains to tackle medicine shortages.

Also touched upon during his keynote address was environmental sustainability and the aim of achieving a climate-neutral healthcare system, including supply chains and medicines manufacturing by 2050. Being ready for the health issues that will come with climate change will require big investments in transitions and the involvement of all stakeholders: policymakers, healthcare, industry and patients.

In closing, Pedro Facon stated that sustainability of healthcare systems is multidimensional and involves trade-offs. Hospital Pharmacists have a key role in influencing the resilience and sustainability of healthcare systems and explaining their perspective on healthcare challenges to policymakers, patients, and society. The active involvement of hospital pharmacists is pivotal for achieving effective and sustainable healthcare systems.

Pedro Facon, public management professional in public health, social security and health crisis governance and management. Deputy CEO of the Belgian National Institute for Health and Disability Insurance (RIZIV-INAMI-NIHD)

SIG – SPECIAL INTEREST GROUPS

Advancing the hospital pharmacy profession together

EAHP set up the first special interest group (SIG) in 2021 as a way to support our members advance towards the implementation of the European Statements and to produce tools and resources that will help our members and individual hospital pharmacists.

SIGs are comprised of professionals that focus on specific topics related to pharmaceutical care, medical devices, and many other related areas. Members of the SIGs are mostly hospital pharmacists but also doctors, nurses, patients, and pharmaceutical industry leaders for the various subject-matter areas. At the moment there are 3 SIGs running.

The **SIG on Automated Medication Management** has developed the European Autonomous Pharmacy Framework. This framework presents a path for pharmacy services to understand the different stages and will provide an insight on the 4 categories included in the framework: Automation, Continuous of Care, Human Allocation and Project Management. Each one of the components have different sub-components with levels going from 1 to 5, showing the different processes of the autonomous framework. This framework was prepared by the SIG with the support of the results of the Survey conducted by the SIG in 2022 and with the support of the different working groups and was inspired by the US model. The SIG has also prepared a detailed spreadsheet allowing individual hospitals to assess and identify at which level they are within the autonomous framework. The spreadsheet will be presented to participants of the session with a set of recommendations on how to use the spreadsheet within their hospital pharmacies.

The second running SIG is the **SIG on Controlled Substances Management** that is assessing the current situation in Europe regarding the management of controlled substances and will develop a set of recommendation to further improve this management in European hospitals.

The SIG is currently running a Survey that will be open until March 31st. The reports will be published in Summer 2024.

Finally, the **SIG on Medication Errors and Efficiency in Oncology** just kicked off its work. This SIG would on the one hand be looking at determining the prevalence of medication errors and their causes, including the healthcare professionals' shortages and the impact of medication errors in healthcare professionals (known as second victims). On the

other hand, the members of the SIG would develop recommendations for lowering medication errors in oncology and improving efficiency across Europe.

Visit www.eahp.eu/SIGs to learn more about the SIGs and read all the reports that have already been published!

EAHP 2024 Board Professional Excellence Award: Kees Neef

The EAHP Board has decided to give the **2024 Board Professional Excellence Award** to **Kees Neef** (The Netherlands). Kees Neef is a key figure of the hospital pharmacy profession in Europe and has been instrumental in the development of EAHP and the EAHP Scientific Committee.

Kees graduated in 1978 and finished his PhD research on "Structure-pharmacokinetics relationship of quaternary ammonium compounds" in 1983. With his expertise, Kees Neef helped advance the hospital pharmacy profession in Europe, fortifying patient care in the hospital pharmacy setting.

During his PhD in the area of pharmacokinetics, Kees Neef developed a computer programme called "MWPharm" to analyse pharmacokinetic profiles of patients, which could reliably personalise a person's drug dosage. This software is used nowadays on a day-to-day basis by hospital pharmacists and has given therapeutic Drug Monitoring another dimension. "MWPharm" was the inspiration for numerous research papers and international publications. During his career, Kees Neef has also been very active as an educator giving yearly courses in pharmacokinetics for hospital pharmacists and residents, making hospital pharmacists familiar with the basic principles of compartmental

kinetics as well as the practical dosing that goes along with that.

Kees became an EAHP Board Member in 2007 and joined the EAHP Scientific Committee in 2006. In addition, he was appointed as Chair of the Scientific Committee in 2010. Kees was involved as an EAHP Board member and as Chair of the Scientific Committee until 2019.

As part of the Board and the Scientific Committee, Kees was instrumental in the advancement of projects like the adoption of the European Statements of Hospital Pharmacy and helped shape what the Congress is today.

For all these reasons, the EAHP Board wanted to recognise the career of Kees Neef and all his contributions to the hospital pharmacy profession in Europe.

KEYNOTE 3 | PREVIEW

Reducing problematic polypharmacy - using Action Learning Sets to optimize sustainable medicine use

Each month in England, roughly 1 million people receive 10 or more medicines. Almost 400,000 of them are aged 75 or over, and over 100,000 of them are aged 85 or over. The risk of errors and risk of hospitalisation increases with age, multimorbidity and polypharmacy. Much of the harm from polypharmacy is preventable/avoidable. While people can easily understand the problem of the potential overuse of medicines, many clinicians struggle with how to address it with individuals they see within their clinics, wards and pharmacies. This lecture by Clare Howard gives insight into how to improve clinicians' confidence in tackling problematic polypharmacy.

Clare Howard is an independent pharmacist with over 25 years of experience working with and for the NHS. Clare is currently the Clinical lead for the National Polypharmacy programme run by the Academic Health Science Network in England. Clare Howard obtained her Pharmacy degree at the University of Aston in Birmingham and qualified in 2004. She has held management roles in various NHS primary and community care settings. In her role as Strategic Health Authority Pharmaceutical Adviser, she led successful regional QIPP and medication safety programmes, both of which gained national recognition, including a Gold NHS Innovation Challenge Prize in 2012, which led to Clare taking on the role of National Lead for the Medicines use and Procurement QIPP Programme for the Department of Health. As the first Deputy Chief Pharmaceutical Officer

for NHS England, Clare led the Medicines Optimisation programme and delivered the first national medicines optimisation dashboard, as well as chairing several national committees.

Clare Howard's current portfolio includes Clinical Lead for Medicines Optimisation at Wessex Academic Health Science Network, where she led the publication of the first national set of polypharmacy prescribing comparators in England, winner of the HSJ Patient safety award in 2019. She has led three national AHSN programmes. The first spread the medication safety programme PINCER. This resulted in over 13,000 fewer patients at risk of harm from clinically significant medication errors. The second was the Transfer of Care Around Medicines (TCAM) programme, which saw over 60 trusts make over 100,000 referrals to community pharmacies and was instrumental in developing the National Discharge Medicines Service. Clare is currently the Clinical Lead for the AHSN Network Polypharmacy Programme.

Over the past five years, Clare Howard has developed the Polypharmacy Action Learning Sets, aimed at supporting general practitioners, pharmacists, and other prescribers in improving their skills and confidence to tackle polypharmacy via structured medication reviews with patients. Built on a model funded by the Health Foundation in the Yorkshire and Humber area of England, an independent evaluation

by Southampton University of five years of this work led to the commissioning of a national scale-up program across the whole of England. This keynote will outline how the Action Learning Sets aim to get a better understanding of why medicines that are not clinically appropriate are not always stopped. They aim to understand from delegates the barriers (practical and cognitive) to systematically stopping medicines that are no longer warranted in older patients. The Action learning sets also explore with delegates how to address some of these barriers within General Practice and support better medication reviews. Moreover, they provide a deeper understanding of shared decision-making and how to incorporate this into all medication reviews (especially for older people with multimorbidity) and outline some of the many tools available to help prescribers conduct successful medication reviews. Finally, they replicate the impact already shown in the independent evaluation.

By giving insight into the journey of the Polypharmacy Action Learning sets over the past five years in England, this keynote shows how to improve clinicians' confidence in tackling problematic polypharmacy and where improvements in polypharmacy can support efforts to improve environmental sustainability.

Catharina Knol – EAHP Team

A worldwide network of Hospital Pharmacists: EAHP Associate Membership

EAHP has opened its membership to prospective international Associate members. EAHP Associate members are national or regional organisations representing the interests of hospital pharmacists and the hospital pharmacy profession within their countries with the ultimate goal of improving patient outcomes.

EAHP has 3 associate members: the Egyptian Foundation of Clinical Pharmacy, the Algerian Society of Hospital and

Oncology Pharmacy and the Uruguayan Association of Pharmacy and Chemistry.

EAHP wants to create a strong network of associations representing the hospital pharmacy profession to move towards a safer and more modern delivery of hospital pharmacy services all over the world. By becoming an associate member, you will be part of a large network of associations willing to improve the hospital pharmacy profession worldwide. There is a large list of benefits like getting

access to the electronic version of the European Journal of Hospital Pharmacy or the possibility to join the Statement Implementation Learning Collaborative Center.

Contact info@eahp.eu to learn more about associate membership programme.

EAHP Working Group on Environmental Sustainability

The climate change emergency and biodiversity loss are fundamental threats to the economic, social and health wellbeing of humanity. EAHP recognises that medicines and the delivery of pharmacy services are important contributors to these threats. EAHP accepts the responsibility to provide leadership to member states in supporting local, regional and European action to minimise the environmental pollution associated with medicines and hospital pharmacy systems.

For that reason, EAHP decided to set up a Working Group in 2023 to tackle this issue. The Working Group is composed by experts and enthusiasts' hospital pharmacies that want to help hospitals across Europe reduce the environmental burden of hospital pharmacy services.

The Working Group is preparing a white paper as a first step to help EAHP members advance towards a more sustainable delivering of hospital pharmacy services. But the group will continue

its work so if you want to be part of the Working Group or want to support this work in some way please **stop by the EAHP booth#9** and register via the electronic form and the team will get in touch with you (or you can send us an email at info@eahp.eu).

The Working Group has also prepared a session that will take place during this Congress on Friday morning called "Sustainable Session - EAHP Environmental Sustainability Working Group - what is the role of hospital pharmacy teams?"

This session will explore what is meant by environmental sustainability including: the impact of climate change and pharmaceutical pollution on both human and wider animal health; actions participants can consider which have been successfully delivered already across Europe, supporting the delivery of environmentally sustainable healthcare. The WG will also explain ways to engage with EAHP on this topic. So don't hesitate to attend!

Anniversary Statements game: stop by the EAHP booth to win some gifts and a free congress registration.

This year marks the **10th anniversary of the European Statements of Hospital Pharmacy** and we wanted to celebrate this with you. The team has prepared a **game** where you can win personalised recycled notebooks, recycled isotherm mugs and enter a raffle to win a free registration entrance for the 1st EAHP Boost in Florence, Italy.

How can you participate? Stop by the EAHP Booth #9 and check the Statements wheel as the team has prepared a wheel with questions about the European Statements and if you get the answer right, you will be able to get a gift and leave your details to then enter a raffle for a free registration for Boost.

EAHP FunRun: Explore Bordeaux Running! Bring your running shoes!

When? Friday March 22th 7.00-8:00 (Sunrise at 7:01)
Where? 7:00 Start at [Entrance Congress Centre](#)
How much? €15,- Pay cash at 6:50 on Friday March 22th
Why? To support Children with Cancer
How? 5 km run around the lake of Bordeaux

Registration is appreciated: kikarun@xs4all.nl
A together run in Bordeaux, at slow speed, for everyone with running shoes.

Expected temperature: +10 to 13 degrees Celcius
Souvenir: White running jacket
We will be back and have a shower before the Scientific program starts.
